## PROJECT SKYLAB – UNDOCKING

September 25, 1973 - 3:45 P.M. - Astronauts Bean, Garriott and Lousma undocked their Apollo spacecraft and left the Skylab workshop in fine shape 270 miles high. Because of control rocket troubles the Astronauts canceled plans to fly around the station before departing and to avoid using two good rocket sets more than necessary. They overcame the problems with some fancy flying and undocked as if everything were normal. Crammed in Apollo were thousands of photos, miles of recording tape, biomedical samples - a live menagerie of fish and Arabella the sturdy spider.
