

CLOSE-UP OF LUNAR SURFACE TAKEN BY TV CAMERA ON SURVEYOR-7, THE LAST IN THE SURVEYOR SERIES OF UN-MANNED SPACECRAFT TO BE SOFT-LANDED ON THE MOON. PREVIOUS SURVEYOR LANDINGS WERE MADE IN THE SMOOTH LUNAR AREA, BUT SURVEYOR 7 WAS DELIBERATELY AND SUCCESSFULLY LANDED IN THE ROUGH LUNAR HIGHLANDS 18 MILES NORTH OF THE CRATER TYCHO. THE PHOTO SHOWS THE ROCKY AND FRAGMENTARY SURFACE ON THAT PART OF THE MOON. THE CENTRE OF THE PICTURE IS ABOUT 15 FEET FROM THE TV CAMERA.
