LUNAR LIFT-OFF OF APOLLO 15 – CAPE CANAVERAL

At 1:11 P.M. today the 2 Moon exploring Astronauts Scott and Irwin lifted-off the lunar surface in the first televised launching from another world. Two hours later they steered the lunar lander into orbit and to a smooth rendezvous and docking with the command ship piloted by Worden. They will bring home some 175 pounds of rocks and soil which was gathered during their 3 surface excursions, which lasted a total of 18 hours and 37 minutes.
