

*Apollo 13 Moonlanding*

AROUND THE MOON - APRIL 14th, 1970

After a near perfect launch, Apollo 13 and its crew were in serious trouble when 2 of the 3 electricity-generating cells lost power in the command ship. The crisis came to night when the Astronauts swung around the moon and fired the engine of the lunar landing module to send them on a correct path back to earth for an early splashdown Friday.
